

We built a better tire. You put it to work.

When your crop is on the line, you need tires you can count on. The all-new non-directional radial tire from Lindsay is designed and engineered to give you maximum performance on all soil types – even in harsh conditions.

Maximize pivot performance and profitability.

- + **Optimized for irrigation:** The patented non-directional radial design reduces rutting while maintaining optimal traction for peak performance.
- + **Versatile application:** Lindsay radial tires are suitable for various irrigation systems, ensuring compatibility with your existing equipment.
- + **Long-term ROI:** Quality construction makes the tires the cost-effective choice for maintaining your machinery in top condition.

Features that benefit you and your operation.

- + **Enhanced traction:** Designed to provide superior grip on various terrains, reducing slippage and improving stability.
- + **Durable construction:** Built with high-quality materials to withstand harsh conditions and extend the life of every tire.
- + **Improved load distribution:** Engineered to ensure even load distribution, minimizing soil compaction and enhancing efficiency.

Choose the right size for your system.

- + **11.2x24 on an 8" Rim:** Perfect for medium-sized irrigation systems, providing reliable performance and durability.
- + **12.4x38 on a 10" Rim:** Ideal for large irrigation systems, offering excellent support and stability.
- + **14.9x24 on a 12" Rim:** Designed for heavy-duty applications that require maximum traction and strength.
