

RTS Guard™

Positive Bicycle & Pedestrian Barrier

- + Separates bicycle & pedestrian paths from major traffic
- + 42" high profile keeps cyclists from vaulting the barrier
- + Narrow footprint
- + Tested to MASH TL-3

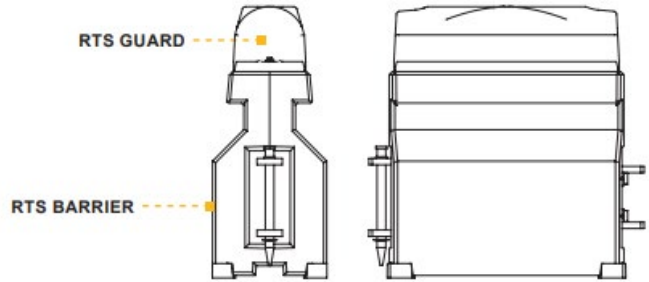

FEATURES

- + Separates bicycle and pedestrian paths from major traffic
- + Tested to MASH TL-3
- + Can be used as a static or moveable barrier
- + 42" high profile keeps cyclists from vaulting the barrier
- + Narrow footprint
- + No ground anchoring required
- + Uses the modular ABSORB crash cushion for end protection
- + Quick and easy to install and remove
- + Can be moved with a Barrier Transfer Machine

Physical Specifications

	RTS Guard Only	With Barrier
Length (TL-3)	35 1/2" (902 mm)	39 3/8" (1000 mm)
Width	11 3/8" (289 mm)	18" (0.457 mm)
Height	10 3/16" (259 mm)	42 3/16" (812 mm)

Bicycle & Pedestrian Barrier with Positive Protection

RTS Guard is a high performance, high containment barrier designed to separate bicycle and pedestrian paths from traffic on busy roads and bridges where vehicle encroachment into the path would have a high probability of causing injuries or fatalities. This flexible barrier can be used as a static barrier that remains in place, or it can be quickly and easily moved with a Barrier Transfer Machine (BTM) to expand the path or for maintenance and street cleaning. The small footprint of each barrier in the wall coupled with the ease of installation and removal make RTS Guard perfectly

suited to the urban environment. When necessary, the modular ABSORB 350 crash cushion can protect the ends of the barrier wall in various configurations for any speed application.

RTS Guard is tested to MASH TL-3 and has a 42" high profile to keep cyclists from vaulting the barrier in case of impact. The barrier has superior deflection characteristics compared to temporary concrete barriers of equal lengths under standard testing conditions..
