9500HS | HIGH SPEED PIVOT

ZIMMATIC[®]
BY LINDSAY

**FAST WHEN
YOU WANT IT.
CONTROL WHERE
YOU NEED IT.**

HIGH SPEED DRIVE CUTS IRRIGATION TIME IN HALF.

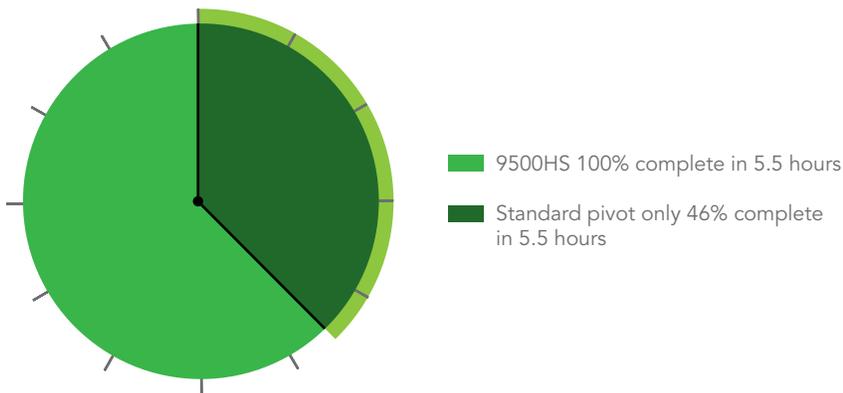

Zimmatic 9500HS pivot. Cost-Effective High Speed Option.

Speed can matter when it comes to irrigation. That's when a high-speed drive can mean all the difference, delivering a quick water application when you need it most – in less than half the time.

Sometimes you need to put down water fast so root crops can germinate properly, or irrigate just before harvest – or even get the right dilution of chemicals. The durable high-speed drive at the heart of the Zimmatic 9500HS is built to run fast and run long with minimal maintenance.

When you need to water it right, right now, you need this solution.

- Retrofits existing Zimmatic pivots; no mechanical changes required.
- Faster application means more efficient water consumption on lighter soils - enabling better management of high-value crops.
- Available in 38" tire configurations for less compaction.
- Works well even on hilly terrain - up to 10% slope.

Many crops benefit from high-speed irrigation. Vegetables with small seeds need a quick watering after planting to keep them from blowing away, while heat-susceptible crops like potatoes can use a quick cooling spray in the afternoon. And high-speed irrigation gives growers more flexibility for timing of late chemical application or a last spray before harvest.
