

NEW!
FIELDNET™ CIRCLESCOUT™

FIELDNET™
BY LINDSAY

NO CELL SERVICE? NO PROBLEM.

FIELDNET CIRCLESCOUT CONNECTS PIVOTS VIA SATELLITE.

FieldNET CircleScout

Bring the benefits of FieldNET remote monitoring to even the most remote pivots.

FieldNET CircleScout is a universal, easy-to-install, monitor-only solution that communicates via satellite to connect your pivots – no matter how remote or out of cell signal range they are.

Now you can know if your hard-to-access pivots are operating efficiently, without having to be there in person. Satellite signal connection means no cell coverage dead spots, a powerful backup battery communicates pivot stoppage in the event of power loss, and our patented copper wire theft alarm informs you of a span cable disconnection.

The power of FieldNET remote monitoring to manage your irrigation, including remote start/stop, is now available for every pivot, everywhere.

Key features and benefits:

- Universal adaptability – works with any brand of pivot
- Easy to install, easy to use – part of the FieldNET remote solution
- GPS provides position in the field
- Highly reliable - backup battery keeps the signal strong in event of power loss

Theft alarm brings peace of mind

Irrigation cable and copper theft can be a problem in remote areas. FieldNET CircleScout features a patented copper wire theft alarm to notify you in the event of a span cable disconnection - no external power required.
