

WATCHDOG TRACKER CR

**IF YOU CAN
MEASURE IT.
YOU CAN
MANAGE IT.**

REMOTE AC MITIGATION
MONITORING TO KEEP
YOU IN COMPLIANCE

KEY BENEFITS

- Accurate measurement of cathodic protection and interference values
- AC/DC current densities, AC current drain, and corrosion rate
- Automatic alarm notifications
- Around-the-clock assurance of AC mitigation

MEASURE. RECORD. REPORT.

THE ALL-IN-ONE SOLUTION FOR REMOTE AC MITIGATION MONITORING.

Watchdog Tracker CR is the tool to help you stay ahead of problems. It's the next generation, all-in-one solution for remote data acquisition and corrosion risk management in AC interference areas.

Watchdog Tracker CR measures, records, and transmits pipeline potentials, current densities, and corrosion rate values for compliance with the NACE SP21424 standard. Remote data-logging gives you access to measurements from any web enabled device, from anywhere in the world. Automatic alarms notify you of potential problems so you can address them early – maintaining pipeline integrity and keeping you in compliance.

When you mitigate AC interference, you mitigate your stress. Watchdog Tracker CR is next generation technology to keep you ahead of problems.

Anytime pipelines and powerlines come together is a potential problem. Watchdog Tracker CR keeps AC mitigation in compliance.

Undetected aggressive AC interference can cause serious corrosion in buried pipelines.

“
AC INTERFERENCE
CAN CAUSE HIDDEN
PROBLEMS; THIS HELPS
US STAY AHEAD OF
THE GAME.”

WATCHDOG TRACKER CR

Key Features:

- Turnkey system including monitor & ground probe
- Built-in data logging
- Simple installation & intuitive operation
- Wireless interface with Elecsys Connect
- Accessible from any web-enabled device

Manufactured in the USA
