## REMOTE ASSET MANAGEMENT & ALERTS TO IMPROVE RESPONSE TIME AND MINIMIZE ASSET RISK

## What if you could know, right from the moment of impact, where and when repairs or attention are needed?

*With RoadConnect, you can.*

With limited manpower and large areas of coverage, it can be difficult to adequately and efficiently monitor a wide range of assets. When one of your roadside assets is damaged, you can't afford to find out days later when someone eventually discovers it.

Manage all of the assets in your jurisdiction and workflow management from one single-source platform. Manageable assets include crash cushions, end terminals, utility poles, guardrails, bridge structures and more!

## REMOTE IMPACT DETECTION WITH IMPACTALERT™

### Key Features:

- Remote proactive management of critical roadside assets such as crash cushions, guardrails, end terminals, utility poles and more
- Brand agnostic
- Simple, fast nondestructive installation
- Rugged, waterproof enclosure
- Long battery life

### Benefits:

- Increased speed and reliability of data capture and roadside asset maintenance
- Timely awareness of impacts to roadside assets with real-time notifications and alerts, improving response time
- Single source of data accessible from any location
- Improved roadway safety for workers and motorists, minimizing personal risk
